Number 27

Local Member Visit The Council Last Monday

Interesting Discussion of New
Legislation Passed

There was a very interesting session at the town council last Monday evening. Mayor Cameron was in the chair with a full council present.

R. L. Robinson M.L.A. was present and discussed with the council several of the new acts passed in the recent session of the legislature.

As the government is prepared to render all possible assistance for the establishment of industries in the province Mr. Robinson asked the Council for information regarding prospects for locating industries here. He felt that this district was one of the best and most suitable in the province from an economic standpoint for the location of industries of any kind and requested the council to forward information regarding suitable buildings, building material and raw material, to the department at Edmonton and would render all possible assistance to bring these matters to a successful issue.

Reference was also made to the new sales tax. Some complaints would be made by merchants. Mr. Robinson asked the council to consider the trouble and expense of keeping track of the new tax, but he said that the cheapest system possible would be all right provided an accurate account of taxable goods was kept. The local member also drew attention to the new act regarding unemployment relief and gave a full outline of how municipalities should deal with these matters.

The mayor expressed his thanks to the council to Dr. Robinson for his visit and for his interest in the welfare of the town.

Mr. Baird visited on Council on behalf of Mr. McHugh in connection with the tennis court. Mr. Baird asked that the council be accepted by the Council for allowing the lot to be used for a tennis court. The part of the original motion which referred to objections was deleted.

The social service tax which is now submitted for the supplementary tax was placed at a minimum of 25 cents and three mills on the land.

A list of property now owned by the town was listed for sale and prices set on same with present tenants given the first opportunity to purchase.

A letter was written offering \$15 for him at rear of his residence. The offer was not accepted.

A letter was read from A. T. Stratton submitting bill for damage done to goods in his car caused by leakage of water from the street drain. Councilor Brydie moved that the bill be not paid as Council was not responsible for surface water. The motion was lost. Councilor Hope moved that a check of the account be made and submitted at next meeting.

Council decided to hold a Court of Revision on Monday June 8th after regular council meeting.

The date for tax sale this

Mr. A. E. Gorham Passed Away Monday

The Funeral Place From
Gordon Memorial Yesterday

Mr. Edward A. Gorham who has been a resident of Redcliff for the past 14 years passed away last Monday after a short illness caused by heart trouble. Two weeks ago he took suddenly ill and was taken to the hospital. For a time it was thought he was improving but he later became gradually worse.

The late Mr. Gorham was born in Huntington County, Quebec 74 years ago. In 1910 he came west and took up a homestead in the Suffield district and after abandoning his farm he came to Redcliff where he was engaged as engineer at the Premier Brick Plant. For the past two years he has been forced to give up active work owing to failing health. His wife predeceased him five years ago and his only relative left is a step-son who resides in Toronto.

The funeral took place yesterday from Gordon Memorial Church and was attended by a large number of gentlemen of the town. He was a quiet and friendly disposition and his kindly affable manner made for him many friends who will regret his passing.

COPPERS NO LONGER IN THE POOR CLASS

Silver dollars in every pocket in British Columbia is the campaign slogan in the coast province, but in Alberta it's "save the coppers for the sales tax." Since the new two per cent. provincial sales tax went into operation May 1st, coppers are no longer in the "poor class." They are in keen demand. Pennies jingle in every pocket.

Mr. J. R. Mackenzie was a business visitor in Maple Creek on Monday last.

A year was set for August 22nd at 2 p.m. to be held in the town hall. Accounts as assessed by the finance committee were submitted for payment.

The Health Board wrote suggesting that Council have a clean up week. Council decided to set aside for last week in May and that town remove all garbage provided citizens rake up their piles.

IF EVERY CITIZEN WERE LIKE YOU

Here's a poem from the Glasgow Herald that will apply to our place:

"Would your town be a better or poorer one if every citizen were like you? That is a fair question to ask yourself. What are you doing in the way of suggesting something for the bettering of conditions in your town? So many citizens, in fact the great majority of citizens are content to mind their own business and give no thought whatever of new conditions in their own town might be improved socially, financially, business standpoint, educationally and morally. How many suggestions do you offer in the year as to local improvements and how they might help to start, in a small way, some industry? In other words is your town the better, poorer or just as poor because of you living here? Make suggestions that you meet from outside your town. It does not cost anything to be courteous and pleasant to those who come to town even from the neighboring villages. It is the friendly spirit of co-operation and Christian love that keeps the world going. Why not make it a community spirit? Someone has said: 'There isn't much to be seen in a little town but what you hear it takes up for it.' That is true, but in the way it is intended. Sometimes why you hear it is the way of the mind and stretch the imagination of those who take a 'dash' in spreading false reports. Let it be helpful to the well-being of your town."

Victoria Day Will be Observed May 25

King's Birthday June 23rd is
Statutory Holiday

Victoria Day will fall on Sunday this year and consequently will be celebrated on Monday May 25th. It was stated at the secretary of state department that Victoria Day is a statutory holiday.

As the birthday of the reigning sovereign is a statutory holiday, June 23, the birthday of King Edward VIII will in future be celebrated. The birthday of King George V, June 3, will no longer be a statutory holiday.

CHANCE IN PLAN FOR WATER DAMS

Agriculture Minister Gardiner has approved a policy regarding the construction of work on the river under the Dominion Act.

The new policy, including a revised basis for engineering and financial assistance for building small water dams and small irrigation works, involves establishment of provincial committees for the purpose of making a plan of the water development committee.

Control of all engineering work in connection with the smaller projects will be transferred to the provinces but they will be financed under the Dominion Act and supervised by the Dominion agricultural department.

Mr. J. H. Bolton has been appointed registrar for vital statistics and also as issuer of marriage licenses. All births, deaths and marriages should be registered with Mr. Bolton.

Redcliff Stampede July 1st

Social Credit Play Here Last Friday

Was Put on by Group From
Medicine Hat

"Mothers All" was the title of the play put on here last Friday evening by a Social Credit Group from Medicine Hat. There was a fair attendance but it had been properly advertised, the crowd would no doubt have been much larger.

The play depicted the conditions which were brought about by the depression and the hand up under which young people are living because of lack of employment, and also because of lack of avenues through which to work off their surplus energy. The play was enjoyed by all present.

Local talent put on several numbers between acts which added much to the success of the evening.

A diplomatic break between Britain and Italy would be inevitable, reliable sources said. British diplomats continued to "flourish the whip of sanctions" and insisted on Ethiopian representation at the League of Nations. Dine Grandi, Italian ambassador in London, was introduced to present to the British government the resolution creating the new Roman Empire with annexation of Ethiopia.

The teachers of the local school staff were delighted to entertain on Thursday afternoon at the home of Mrs. Selby was ably assisted by Miss Salton and Miss Selby. Requests were Miss Hume and Miss McVane of Medicine Hat and Mrs. E. L. Stone to whom were presented beautiful bouquets of flowers as mark of appreciation of the teachers for the assistance rendered by these ladies in connection with the recent school festival. Miss Selby presented the presentation on behalf of the teachers and a pleasant social hour ensued.

Churches

ST. MARY'S CHURCH

Mass will be celebrated on 3rd Sunday of each month at 8:30 a.m.

Big Carnival In Redcliff on Friday, May 22

In Broadway Store-Put on By
St. Ambrose Church

This year, Victoria Day, May 25th, falls on a Sunday so the holiday will be observed through on Canada's "M" Monday following. The week-end holiday observance will commence locally with a gigantic carnival in the Broadway Department Store on Friday evening, May 22. The two days will be utilized for the occasion with side booths and games downstairs and various unique sideshow on the upper floor. Elevator service will be maintained for the convenience of patrons. A special feature of the carnival will be the large number of assorted groceries to be given away as a door prize to the holder of the lucky ticket. Many other valuable prizes may be won at the various concessions on the main floor. The event is being widely advertised throughout Southern Alberta and is expected to draw a large crowd from neighboring points as it provides holiday season entertainment of a totally different kind full of prizes, with laughs and thrills great surprises, and many free for young and old. The big affair is being staged by St. Ambrose Church. All roads lead to Redcliff on Friday, May 22nd. Patrons buying tickets at the door will not get in on the draw for the valuable door prize so all are advised to purchase numbered tickets at the advance sale which opens today. See posters for further particulars.

New Air System In Monarch Theatre

The management of the Monarch Theatre has just made public the important announcement that a complete air conditioning system is being installed in the theatre. When completed the Monarch will be in the front rank of Canadian theatres and will have the most modern and up-to-date conditioning system in Canada.

HOME

Home is not made with hands
Home is either here or there
Home is where true love expands
And that may be most anywhere

It may be in the far off east
It may be in the golden west
Where 'tis, is, is joyful place
And that one place is always home

So whether it be grand or no
Or whether in a humble cot
Where lives the soul in perfect bliss
That's home with highest happiness

The grand total of languages being and dead has been compiled by the French Academy of Science. No less than 8769 have been used since the beginning of time. Of these there are 71 languages spoken today.

The most widely spoken language spoken today is English; then German and Russian; Spanish, French and Italian.

Romance In Trade-Secrets

Process Of Making Many Things Unknown To Western Manufacturers

Many people wonder at the amazing prices paid from time to time for Persian carpets, musical instruments by famous makers, pottery and enamelled jewellery, and other objects of art. There was, for example, the record price of \$115,000 paid some time ago for the Empress's carpet, a Persian masterpiece fully 400 years old. Such a carpet may represent the continuous labor of hundreds of men, women and children for more than a century, but its real value is in the marvelous colors, carpet-making being a national industry in the East, the secrets of the vegetable dyes for these colors are closely guarded. Neither bristles nor threads will permit the trill carpet-weavers to reveal their ancient secrets, and thus their wares realize a high price in the European and American markets.

Another trade secret which intrigued furniture and cabinet-makers in European countries for centuries was the method of lacquering employed by Chinese and Japanese craftsmen. The first man to bring back part of this secret from the East was Father Francisco Xavier, Jesuit missionary, who returned from China in 1740. But what he was able to reveal left the western manufacturers even more mystified than ever. The whole secret of this wonderful lacquer was not known in Europe until less than 100 years ago, and the man furniture-makers have to thank for the priceless information is John J. Gault, a British consul in Tokyo. He obtained the secret on behalf of a rich syndicate in England, and smuggled it out of Japan among his consular papers. The raw material is obtained from lacquer trees, which are tapped for the sap. This is exposed to the sun for a time, and a certain quantity of water is added. Even today, European craftsmen cannot get quite the same result as the Japanese and Chinese workers, for the real secret of lacquer results from a chemical combination brought about by the action of ferment. This part of the process is still entirely unknown in western countries.

B.C. Fish Meal

Health-Building Meal For Poultry And Other Stock

Reduction plants in British Columbia turned out over 3,300 tons more fish and whale meal last year than in 1934, but the oil output decreased by something more than 20,000 gallons. So far fish oil sales have been concerned with the oil in production for the year but that increased was more than counterbalanced by a drop of 10,000 to 287,000 gallons in the manufacture of oil from whales, which were taken in fewer numbers than in 1934, or 202 as against 250.

Even with the decrease in whale oil, however, the total production of fish and whale oil from the Columbia plants reached pretty nearly 2,500,000 gallons, reportedly stated. There would be a good many health-building meals for poultry and other stock in that quantity and a good deal of oil for soap making and for paint making to indicate only three of many uses to which fish oils are put.

The output of meal, which is used for stock feeding, was 13,801 tons, as compared with the 12,094 tons which were manufactured in the year before. In addition to the meal, there was also a production of 254 tons of fertilizer at the whale plants although in this case, too, the output is expected in view of the decrease in the number of whales killed, the figures were smaller than they had been in '34.

Canadian An Egg Eaters

More eggs are eaten in Canada than in any other country in the world. The per capita consumption of eggs in Canada is nearly 400 per year, or more than one a day per person. In 1935 Canadian consumption 223,260,100 dozen, according to the Bureau of Statistics. It also provides the information that in that year 223,250,000 dozen eggs were home grown.

Reasonable Progress

Canada is making reasonable progress toward recovery and is enjoying almost a creeping prosperity said Floyd R. Chambers, editor of The Financial Post, in an address at Toronto. The Dominion is lagging in development of air transportation, he declared, saying a transcontinental passenger and mail service must be provided for in the next five years.

R.A.S.C. GO INTO INTENSIVE TRAINING

The Royal Army Service Corps personnel is undergoing strenuous training at the present time at Feltham. Middlemen. Here we see transports purposely ditched, bogged and even turned over, so that recruits can be taught how to manage unclimbing operations.

Editorial Conduct

American Society Of Newspaper Editors Discovers Linderberg Case

The departure of Colonel Charles A. Linderberg from the United States was discussed by the American Society of Newspaper Editors in a professional examination of their editorial conduct. Although sympathy for the aviator was expressed, Lee A. White, of the Detroit News, who led the discussion, reminded his colleagues that "when considering statements regarding Linderberg's desire to avoid publicity, it should also be remembered there was a period in his life when it was publicly he sought."

"Though not condoning all that had been printed in this country of the Linderberg case, White held the British press to account for its use of the word 'flying' in its Linderberg publicity record."

In a discussion of the rights of citizens to privacy, White insisted that the American press must remain unimpaired. The vast system of news collecting machinery which American newspapers have perfected in every part of the globe was upheld as a world model for "fairness" by Nathaniel Howard, managing-editor of the Cleveland Plain Dealer.

"To-day, more than ever," Howard said, "the American newspaper, in its abiding devotion to public psychology, are getting us the facts against the will of autocrats and bureaucrats who have no conception of oil or sympathy with democratic free speech and free press."

War And Human Lives

The Price Japan Has Paid For Conquest Of Manchuria

The price Japan has paid to its soldiers' lives for conquest of Manchuria is revealed in an official statement which estimates 2,500 killed. Of this number 2,384 were killed in action and 1,316 were victims of disease.

In addition 11,210 soldiers were wounded in combat and 2,588 incapacitated by frostbite. The figures cover the period starting with occupation of Mukden on September 18, 1931, and ending December 31, 1935. With inclusion of all sickness cases the total is estimated at 37,111 men of all ranks temporarily unfit for duty during 51 months of service.

Farm Run By Women

Spring planting has started in Iowa in "the largest" of Perry county's best-kept farms, where 377 acres are tilled and tended exclusively by four women. Ranging in age from 41 to 86, the women of the Meckling family have won a living from the soil for more than 13 years, assisted by neighbors or hired men.

The first book on vital statistics was written by an Englishman and published in London in 1662. He showed that there were more boys born than girls and that population could be estimated from the death rate.

One type of three-deck motor bus in Rome provides a smoking compartment and special accommodations for dogs. It carries 34 passengers.

One Cause For Arthritis

Sulphur Is Diverted From Normal Channels In Body

A cause for arthritis in peculiar sulphur "jags" which the human body gets for various still unknown reasons has been reported to the American Chemical Society.

The antidote for these jags is more sulphur. Six years of experimenting which has carried this sulphur complex definitely into medical stages were described by Dr. M. Sullivan and V. C. Hase, of the Georgetown University chemical research laboratory.

They discovered the sulphur jags through study of finger nails and hair. Both these organs contain high amounts of the human body form of sulphur, cystine. Changes in the sulphur in nails especially account for some, but not all changes in health.

Patients with arthritis had less than the normal amount of sulphur in nails. Healthy persons averaged 13.7 per cent of cystine, but rheumatic sufferers dropped as low as seven per cent.

"This implied," the report stated, "an intoxication factor which draws on the sulphur complex and thus diverts sulphur from its normal channels."

"Injection of colloidal sulphur was tried in a number of patients with low cystine nails. There was a marked increase in the cystine content of nails after the injections and good improvement in the condition of the patients."

College For Nurses

Action On Project Was Deferred At Meeting In Ontario

Action was deferred by the Ontario Registered Nurses' Association at its final session on a proposal regarding a Canadian college for nurses designed to permit Dominion-wide scope in nursing.

The proposed college would be devoted to preparation for examinations recognized by all provinces and thus obviate taking examinations in all provinces should a nurse desire to move from one to another. The convention felt the subject would possibly be sent down to the provincial conventions by the Dominion convention in Vancouver in July.

So that blind people may read it, one of Cornell University's bulletins—"Poetry Keeping For Junior Postmen"—is to be printed in raised Braille type.

Mexco, Motion Holy City, is to have a good movie campaign.

"WIP!" (to radio entertainers): "After blind initiator you are! Why can't you initiate a homing pigeon earlier?"—Smiley's Weekly, Sydney.

Treating Seed For Smut

Is Only Effective Method For Control Of Disease

Many of the best varieties of wheat, oats and barley are susceptible to smut, and until they can be replaced by suitable smut-resistant varieties careful and regular seed treatment offers the only method of controlling this disease.

Freedom from seed-borne diseases, such as smut, is usually considered to be one of the most important characteristics of registered and certified seed, and purchasers of this seed, relying on its quality, frequently sow it without treatment. Yet, according to a statement from the Dominion Seed Research Laboratory at Winnipeg, even seed of the highest quality, showing a trace of smut, may produce a smutty crop if sown without conditions favorable for smut infection.

The treatment of wheat, oats and barley has been greatly simplified by the recent introduction of organic mercury dusts such as new improved ceresan. This dust, when applied to the seed at the rate of one-half ounce per bushel, effectively controls the smut on oats, covered smut of barley, and bunt of wheat. It also improves seed germination. Tests are being made of other organic mercury dusts now being sold in Canada.

Wheat may be treated with copper carbonate dust (two ounces per bushel) for the control of bunt, but this dust should not be used for grain, such as oats and barley, which have a coarse hull. Copper sulphate, commonly known as bluestone, may cause severe seed injury and should not be used for treating grain.

Formalin solution (one pound of formalin to thirty gallons of water) has long been used as a treatment for the smut of oats, covered smut of barley, and bunt of wheat. This treatment, if well done, is effective, but it is likely to impair the germination of the seed, particularly of wheat, and reduce the yield.

New Gift Crase

Presenting face masks of one's self to friends is a new gift crase in London. An artist covers the face with what he calls "magic paint," which he has discovered. He takes it off almost immediately and has a perfect impression of the sitter's face. From the mold is cast the mask in porcelain or bronze.

"I desire no remuneration for this poem," said the office visitor. "I merely submit it as a complimentary note." "Then my dear sir, allow me to return the compliment," replied the editor with true journalistic courtesy.

Planting Roses

Important Details To Be Observed To Ensure Success

The successful establishment of a rose plant in a new position depends to a large extent on the observance of a few important details of planting. Most rose catalogues carry instructions for the guidance of customers, but this advice is not generally available to those who purchase their plants from the dealers of our larger cities. Observation of some of these plants has prompted this article.

Plants from the above source, or those obtained from a distant nursery, are immediately benefited by being immersed in deep water as soon as received. From 12 to 24 hours is enough. If the ground is then unfit for planting, they should be placed in shallow troughs and completely covered with damp soil, making it firm about the roots and comparatively loose over the branches.

Early planting is desirable and important but should not be attempted until the ground is frost-free to a considerable depth and has lost its stickiness.

During planting and at all times the roots must be protected from prolonged periods of exposure to sun and wind. The Montreal Experimental Station a large tub of water placed in a central position takes care of the plants in bulk, and a pail is used to carry a few at a time to where they are needed.

The hole for the reception of the roots should be wide enough to allow them to be spread to their greatest extent, and a little deeper than usual necessary. This extra depth enables the planter to place the plant in its proper position by shaking it during the process of filling in the hole. The roots should be spread out to four inches and among the roots until the plant rests at the required level. When the filling in is completed and trodden down, the planter should take care of the plant from which the branches radiate, should be two inches below the surface. The roses are then pruned by removing all weak growth and cutting back the stronger branches to within six inches of the ground. The cut being made one-half inch above a bud pointing outwards or away from the plant center.

Dates Back Many Centuries

Research Shows Crossed Bread Was Used In Stone Age

To us Hot Cross Buns mean Lent, but the origin of the Hot Cross Buns dates back much further than the beginning of the Christian era. The symbol of the cross is in itself an ancient sign that existed in Early Babylonian and still later Egyptian cities. Digging operations in the Valley of the Euphrates has disclosed the use of cities long since passed away. From these ruins there have been taken clay tablets that record offerings of crossed bread to Astarte, a Babylonian goddess, some three thousand years B.C.

These seem a long time ago, but research has disclosed the fact that the cross was used extensively in the Old Stone Age. Fossilized remains of bread baked by these early ancestors of the human race are plainly marked with a cross in some cases, the significance of which will never be known. Certainly like the Greeks, the early Romans ate Cross Bread at public banquets and many superstitions are connected with the custom. It would be quite within the bounds of possibility to suggest that the bakers in the royal bakeries of Rome had looked forward to the usual Hot Cross Buns day as at the present time.

Construct New Building

Bank Of Canada Purchases Property At Federal Capital

The Bank of Canada has purchased property costing approximately \$75,000 and will construct a new building to house the bank, Graham P. Towers, governor, stated at Ottawa.

The new building will be ready for occupancy within two years. It will be two or three stories high, with provision for additions upward and at the rear. The front will be of sandstone construction to conform with the nearby Confederation block.

Destiny Of The Jews

The Jews are described by Lord Tweedmouth as the "natural bridge between east and west." "And to have a strong and confident Palestine," he told members of the national council of the Zionist organization of Canada, "will be in the immediate future the most valuable to the British Empire."

House Fly Menace

Is One Of The Principal Agents In Spreading Diseases

With the advent of spring comes the menace of the house fly—which may correctly be described as the "pest" of the season. It is world-wide in distribution and is notorious for the part it plays in spreading such serious diseases as typhoid fever, tuberculosis, cholera, dysentery, infantile diarrhoea, and other dangerous epidemics. The fly breeds in filth, collects itself with filth, carries germs of filth and disease on its legs and body and in its intestines; and with these germs pollutes food, especially milk, one of the principal nutritional items in the establishment of the human race.

It is known that a single fly can carry as many as five hundred million germs on and inside its body, but until there is active co-operation on the part of entire communities, including the municipal authorities, and every single individual in the community, to remove filth, the main source of fly-propagation, the menace of the fly to human life will remain.

The most effective and desirable method of controlling the house fly involves constant and active cleaning or reducing its breeding places by proper treating or disposing of such materials as manure and garbage. Flies should be kept as tightly covered and where possible all refuse should be burned or buried at once or without delay. Flies should be kept away from food, and refuse should never be left exposed but sprinkled with powder or kerosene oil.

Windows and doors of houses, particularly those of the dining room, should be kept closed and screened and all flies that gain entrance should be kept as tightly covered and where possible all refuse should be burned or buried at once or without delay. Flies should be kept away from food, and refuse should never be left exposed but sprinkled with powder or kerosene oil. Flies should be kept away from food, and refuse should never be left exposed but sprinkled with powder or kerosene oil. Flies should be kept away from food, and refuse should never be left exposed but sprinkled with powder or kerosene oil.

An effective poison bait, but one which is not dangerous to humans, are exploring or romping about, is made by exposing in saucers a mixture of molasses and kerosene. In a cupful of sweetened milk or water, fly sprays, of course, operate best in closed spaces, and this and other measures should be kept up and burned, or thrown into very hot water to prevent any from recovering.

May Take Quarter Century

Compiling Catalogue Of British Museum Is Huge Task

Compiling of the British Museum catalogue in London is expected to be the longest task of modern times. Twenty-four volumes are now on the shelves, and go only as far as subjects with names beginning "Barth." Every book possessed by the Museum, estimated to be about 4,000,000, is being catalogued. It is estimated that the whole thing will probably run to 230 volumes, probably more. An additional staff of about 20 is engaged on the work, including a group of women who are temporarily on the Museum establishment. No one can say a year or so when this colossal index will be finished. One estimate is that the whole job will take 25 years. The British Museum's catalogue is a masterpiece of a mile a year. New books are arriving at the rate of 30,000 a month.

Ten Million For Apples

Received By Canadian Growers For Last Year's Exports

Apple growers last year received approximately \$10,500,000 for exports of Canadian apples to apple markets throughout the world, according to a statement of trade and commerce. With average quality, this was the highest amount received in more than 10 years.

Production of apples in Canada during 1934 was placed at 4,422,700 barrels, with a shipping value of \$12,652,100, an increase of more than six per cent over the quantity over the past five years, average and an increase of more than 33 per cent in value.

"Father," said the small boy, "what is a demagogue?" "A demagogue," said his father, "is a man who can rock the boat himself and persuade everybody that there's a terrible storm at sea."

Trees do not grow up; marks on the trunk do just move upward as the tree grows taller.

WORLD HAPPENINGS
BRIEFLY TOLD

Mail service eight days from England to South Africa is specified in contracts entered into by the British post office department.

Medical reports disclosed that 2,600 persons died of cholera in Russia from the beginning of the outbreak in February to mid-April.

A swarm of elephants have arrived in London from central Africa for experimental purposes and some will be released to see if they are hostile.

Italy has lost \$160,000,000 in gold—almost half her previous bullion reserve—since the outbreak of the Ethiopian war, the financial news paper L'Information declared.

The sixth annual report of the National Radium Commission says Britain's radium is running out, and more is badly needed to carry off the treatment of cancer.

A cargo of fur valued at close to \$100,000 reached Edmonton by train from McMurray to where it had been flown by southern aeroplanes from various points.

South African motorists need expect no relief from taxation till the roads are put into thoroughly good order throughout the country, high ways officials have intimated.

The Canadian Shipping Act, one of the most voluminous acts ever passed by the Canadian parliament, will come into force on Aug. 1. Marine Minister Howe stated at Ottawa.

Automobile accidents for the first two months of this year increased 11.6 per cent. over the same period last year, according to an announcement by the Ontario motor vehicle branch.

Government statistics, which state that seven years have been added to the expectation of life since 1911, say London's suburban residents are "healthier than the rest of England's people."

Wheat Exports Increase

Increase in Both Volume and Value Is Shown

Canada's exports of wheat in the fiscal year ended March 31, showed a substantial increase in both volume and value compared with the previous year, the Dominion bureau of statistics reported. At the same time wheat flour exports showed an increase in quantity and an increase in value.

Exports of wheat amounted to 179,124,189 bushels, worth \$148,076,885, or an average of 83 cents per bushel, compared with 165,701,883 bushels at \$132,441,085, or an average of 80 cents per bushel in the preceding fiscal year.

Wheat flour exports totalled 4,558,417 barrels, worth \$19,382,617, or an average of \$4.25 per barrel, valued at \$13,384,040, or an average of \$3.73 per barrel in the fiscal year ended March 31, 1925.

Boy Scout Meet

World Assembly To Be Held in Holland Next Year

The fifth world Boy Scout jamboree will be held in August, 1927, at Bismarck, near Haarlem, Holland, according to official announcement received by Dominion headquarters of the Boy Scouts Association.

Plans are under consideration for acceptance of the Dutch invitation for the sending of a Canadian contingent of scouts and scoutmasters. It was stated the Netherlands government will mark the event by the issue of a special jubilee postage stamp as was done by Hungary for the previous jamboree held there in 1923.

Advice To Teachers

Teachers must abandon their apologetic attitude toward the profession and the public discard its conception of the "teacher type," declared Dr. G. W. Kerby, principal of Mount Royal College, Calgary, in an address at the Alberta Teachers' Association convention. Dr. Kerby criticized the attempts made by some communities to keep the teacher's social life in a "narrow sphere. It had been too frequently the case that the community set the teacher aside from life, he added.

"Bring me a bowl of clear soup and a large screen," ordered the man with the new set of furniture. "Why the screen, sir?" asked the waiter.

"So I won't be able to see that fellow at the next table eating a porterhouse steak."

New Zealand has no native mammals, except bats.

Jack Miner Foundation

Ontario Government Gives Royal Assent To The Incorporation Bill In 1921 The Jack Miner Migratory Bird Foundation was incorporated in U.S.A. Last week the Ontario government put through special legislation, known as "The Jack Miner Bill," giving royal assent which incorporates the said foundation in Canada, and allows the said foundation to do business, such as soliciting contributions and bequests, and owning land in Canada as bird sanctuaries.

Jack Miner has agreed to give his home and bird sanctuary to the said foundation, when men and women have contributed enough funds to The Jack Miner Foundation to ensure him the place will be kept on a perpetual basis.

All money, such as gifts or bequests, are to be held in trust, and only the small interest used to pay the upkeep and expenditure on The Jack Miner Bird Sanctuary.

The object of the foundation is to raise one million dollars to be held in trust, so that there will be enough money to carry on educational campaigns in the public schools of Canada to educate the youth on the value of bird life to the Dominion. Jack Miner's motto is "Educate instead of legislate." More education and less legislation. The Ontario Government giving its royal assent, assures the contributing public that the legal set-up is on a solid basis, and that there can be no money misused in any way, as all gifts and bequests are to be held by a trust company and invested in government bonds.

Jack Miner's Bird Sanctuary is known the world over, and now the establishment of The Jack Miner Migratory Bird Foundation will more or less make his place an international park, and his life-work will be carried on by the interest from monies contributed by donations or bequests to the said trust fund, known as The Jack Miner Foundation.

Jack Miner says "It is not as many of his wealthy friends like to have a few hundred thousand dollars to The Jack Miner Foundation, where birds can always be seen alive and saved from destruction. It is to have several millions to museums where only dead, stuffed specimens can be seen in glass cases."

Jack Miner being so well known to all the men and women who perpetuate his home and bird sanctuary will become as famous as Jack Miner throughout the world, and their names will go down in history with Canada's well known men of letters, naturalist, philosopher, lecturer and author. The slogan among Jack Miner's friends is "When nature's work will remember The Jack Miner Migratory Bird Foundation."

Has Strange History

Centuries Ago Dying Woman Founded Tichborne Dole

A strange history attaches to "The Tichborne Dole," which was recently distributed at Tichborne Park, Alresford, by Sir Anthony Tichborne, Countess of a Lady Tichborne, when on her deathbed, asked her husband to send money to provide for an annual gift to the poor in her memory. Her husband, by no means a model character, matched a blazing brand on the forehead and told her he would set aside the revenue from as much land as she could walk around before the brand burnt out. She accepted the challenge, had herself carried off, and confined to crawl on hands and knees in a circle enclosing several acres before the brand splintered out. The "Dole" is distributed in flour, and even during the war years it was continued by special permit of the Food Controller.

Reclaiming Land From Sea The British colony, Port of Spain, Trinidad, is being enlarged at the expense of the Atlantic ocean. Already 80 acres of land have been added to the area as the result of reclamation work being carried out by the Trinidad government. R. R. H. Board, resident engineer, said reclamation work was not yet half finished and was progressing at a satisfactory pace.

"Why did you tear the back part out of that new book?" asked the long-suffering wife of the absent-minded doctor.

"Excuse me, dear," said the famous surgeon, "the part you speak of was labelled 'Appendix' and I took it out without thinking."

In one part of the Near East we are told, a husband lies a knocking round his wife's chin if she is talkative. This is certainly more humane than a sock on the jaw. 2148

"HOME DEFENCE LAIDS"

PRIVATE J. HULL: "We can't go short-handed! Who'll help to man the gun?"

A Rare Occurrence

St. Paul's Cathedral Had Third Burial Within Six Months

The rare incident of a third burial within St. Paul's Cathedral in six months happened April 18, when Louise Creighton, widow of a former Bishop of London who died in 1901, was buried beside her husband in the crypt.

It is doubtful if any woman has been buried in St. Paul's since the great fire in 1666. Mrs. Creighton was 86. Her husband was regarded as one of the greatest historical scholars of his generation. His wife composed impressive intellectual gifts, her biography of her husband having been considered a masterpiece.

After her husband's death King Edward VII. granted her apartments at Hampton Court palace. But subsequently she removed to Oxford. Her biography was the immediate predecessor of the present Bishop of London.

The other recent burials within St. Paul's were those of Lord Jellicoe in November and Lord Beatty in March.

Too Highly Rated

Health Value Of Spinach Is Not Very Great

Good news for spinach lovers! The leafy vegetable, obnoxious to many, but with a widely heralded health value, is being its high standing, discussions at the opening session of the American Institute of Nutrition at Washington revealed.

Spinach has been considered a valuable food because it has a high content of blood and bone building iron and calcium. Less than half of the iron content of spinach, however, and less than a third of its calcium, are in a form that can be used by the body, it appears from a report by Dr. M. K. Hewitt and G. R. Cowgill of research made by them at Yale University with the late Prof. L. R. Mendel.

Must Be A Record

Maritimers at Saint John, N.B., have found a record which rivals that of a Budapest barber who claims to have shaved a man in 28 seconds. They produce the record of James R. Pitt, former Saint John resident, who died in Cambridge, Mass., who claimed he shaved a man and ran 100 yards in one minute. Mayor Brooks of Cambridge once offered \$500 to anyone who could break Pitt's record, say the old-timers.

Here's a Six-sided Way To Beauty

Household Arts by Alice Brooks

Knit a Summary Bedspread or Cloth

Place by Piece Way

PATTERN 5584

Is it a bedspread? admiring friends will ask. And how proud you will be to say you made it all yourself, both queer and easily, and follow the clear directions for the easy-to-knit triangles, which repeated and joined, form a striking, shaded medallion. If knitted in string, you'll find your bedspread the ideal. By no top or scarf is doubly desirable.

In pattern 5584 you will find complete instructions for making the triangle shown. An illustration of it and of the stitches needed, materials requirements.

To obtain this pattern send 20 cents in stamps or coin (post paid) to Household Arts Dept., Winnipeg Newspaper Union, 175 McEldowney St., Winnipeg.

There is no Alice Brooks pattern book published.

Natural Chemistry Factory

Chemists See Treatment For Some Allergies in Stratosphere

First clues to a vast natural chemical factory in the stratosphere, containing a different kind of oxygen, and even possibilities of use as flying saucers for "space" experiments, were reported to the American Chemical Society at Kansas City.

Where the temperatures are 80 degrees below centigrade—50 below zero Fahrenheit—it appears from studies reported by Dr. R. M. Cole, of Northwestern University, that the oxygen carried aloft in the expanding air of sea water and moisture the dry droplets and transfers in the air, while at the same time oxygen in the air takes the place vacated by the sea water oxygen.

The oxygen of water and that of the air are not the same—a fact Dr. Cole announced a few months ago which has since been confirmed by other chemists.

The difference in the two oxygens is in weight. Both water and air contain oxygen atoms weighing of 16 and 18 in atomic weight. But for some reason the lighter air contains more of the heavy oxygen.

The net difference is that air oxygen has the atomic weight of 16.0001 while water is 16.0000.

That the stratosphere chemical factory seems to operate as explained at the chemical society's heavy water symposium. When the heavy particles of oxygen leave the water vapor in the stratosphere the water is not turned partly into hydrogen gas as it would be in other regions.

The reason is that chemical "equilibrium" exists between the air and the vapor in the intense cold and reduced pressures miles aloft. For each heavy oxygen particle that leaves the water droplet, a lighter one enters, having left its previous residence—a molecule of air. The process is called "exchange."

Has Proved A Success

Panel Heating Is Now Widely Employed in England

Panel heating, the most recent development in heating methods since the central heating plant came into use, is now widely employed in England. Hot water is circulated through oak lattice pipe concealed in the ceiling from which heat rays are sprayed downward.

Unlike all other methods, by which the air itself must be heated to around 72 degrees for comfort, panel heating produces the same pleasant sensation of warmth as the sun, at an air temperature of 65 degrees or lower. Because the warmth of the variable rays is so pleasant, the skin and the clothing, windows can be opened often to give any discomfort or dryness.

An excellent illustration is high, but operating costs show savings as high as 25 per cent.

Praise For Senate

Lack Of Partnership And Importance Of Work Is Stressed

There is a lack of partnership in the Canadian Senate was reported by Senator Iva Campbell Pallas in an interview at Niagara Falls.

"Since I've been in the Senate I realize the importance of the work done here in a measure I didn't before," she said. "There is almost an entire absence of partnership and the great majority seem to be just before on the business of the country as it comes before them."

"They approach it as a judicial body. The small number of members in the legislature of the Dominion is due in large measure to the lack of interest women take in political affairs."

Vice-Regal Visit To West

The governor general and Lady Tweedsmuir will be in residence at the vice-regal quarters Quebec Citadel from early in June until the beginning of August, it was announced at government house. During that time they will make a tour of the province. The legislative party plans leaving about August 6 for British Columbia where His Excellency will open the Canada-Pacific exhibition on August 26.

Largest Producer Of Platinum

Clarendon-Canada has placed Russia as the world's largest producer of platinum, J. W. Curran, editor of the South Daily Star, said that South Africa was supposed to be the largest producer of the precious metals industry in Canada. He discussed platinum discoveries contiguous to the Algonia city.

YOUR GARDEN

Even with the most fertile and open soil, expert gardeners stress the importance of thorough cultivation.

The preliminary soil will usually be done with a spade, or digging fork where space is limited, but in the country where land is still valued by the acre a horse or tractor-drawn plow is used at least once during the year, and between the plowing and the digging, the soil is thoroughly turned over. Later on, just before seeding it is usually best to make a final turning, in order to break down all lumps. The benefit of frequent tillage is twofold. It will destroy weed growth, thus insuring the fertility and moisture used by their unwanted plants and it will also conserve moisture from evaporation which is always more rapid in hard, packed, uncultivated soil.

Where the area devoted to the garden is limited careful attention must be given to such points as drainage between rows and between plants so that all space may be used to advantage. Each plant must be spaced so that its roots will be avoided. A study of relation of the size of plants to the size of the garden. Such crops as radish and turnips should be planted in the rows of the later maturing crops. The early maturing crops may be planted between the rows of the later maturing crops. Two or three crops of such plants will be ready to harvest on the same area. A successful garden is one in which plants are planted at intervals is also desirable.

For much result, an important point with the new garden or with properly annual is to plant flowers will make a very satisfactory garden. The flowers are ready to grow. They are indispensable, too, in filler in the gaps in the perennial bed which are left by the removal of winter damage. In almost every garden, there are many plants which are very desirable, almost every conceivable colour, shape and height. There are bushy plants like the geranium, which are very desirable backgrounds to serve the purpose of the garden. There are climbers such as the rose, which are very desirable. There are flowers which will cover fences, screen verandas or other parts of the garden. The standard roses heights range from the inch to the foot. The flowers, Cosmos and Zinnias, which vary from 18 to 36 inches. Many of these things can be planted as seed in the open ground from late April until the first of June. For short cuts or unusually early results the seeds can be purchased as well as started plants.

Guarded By Police

Former Chief Secretary For Ireland Receives Protection

It was revealed that the police guard is still maintained outside the chambers in Gray's Inn of Lord Greenwood, chief secretary for Ireland during the stormy years of 1920-22.

Lord Greenwood, a native of Wiltshire, Ont., returned to Ireland some years ago. But the police guard remains at the chambers and he is still shadowed by foot, land yard men.

These precautions date back to the turbulent period preceding the signing of the Anglo-Irish treaty of 1922, creating the Irish Free State. Lord Greenwood, then Sir Hamar Greenwood, was the last person to hold the office of chief secretary for Ireland as it was abolished under the treaty.

Lord Carson, solicitor-general for Ireland in 1892 and a prominent figure in the pre-war political struggle between pro-British and Nationalist Irishmen, was likewise guarded until the day of his death a few months ago.

Carson constantly grumbled at the insistence of the police upon his carrying a revolver. He held it was a nuisance because it made his pocket bulge.

Old Theory Explored

Drafts Or Wet Feet Cannot Give People Colds

Dr. J. A. Bush, director of the department of hygiene and public health of Western Reserve University School of Medicine at Cleveland, Ohio, has been studying the old theory about the common cold in an address before the medical association of the province. The Ohio Academy of Science. According to Dr. Bush, you can catch cold by sitting in a draft.

You can't catch cold by stepping into a cold room after a hot bath.

You can't catch cold by getting your feet wet.

You can't catch cold by rushing outdoors without an overcoat.

You can catch cold by infection only.

The first automobile imported into the United States was one built at the World's Fair in 1893.
